ANDREW MEANS RESPIRATORY THERAPY

www.andrewcollege.edu

What is Respiratory Therapy?

Respiratory therapy is the practice of examining patients who are experiencing issues with their breathing. Respiratory therapists care for patients who have trouble breathing—for example, from a chronic respiratory disease, such as asthma or emphysema. Respiratory therapists perform chest exams and create treatment plans to resolve problems and illnesses within the lungs. Patients may range from newborns to the elderly.

Students in the program learn diagnostic and therapeutic procedures applicable to pulmonary care. In addition to classroom and laboratory components, clinical experience at selected area hospitals, pulmonary offices and long-term acute care facilities is required.

Graduates of this program are eligible to sit for credentialing examinations administered by the National Board of Respiratory Care (NBRC). In addition, graduates are eligible for Georgia state medical licensure, a requirement for practicing in the state, and licensure in all states.

Program Goals

The primary goal of the Respiratory Therapy program at Andrew College is to provide quality education in order to prepare graduates with demonstrated competence in the cognitive (knowledge), psychomotor (skills), and affective (behavior) learning domains of respiratory care practice as performed by registered respiratory therapists (RRTs). The goal of the Respiratory Therapy program is consistent with the mission of Andrew College. The faculty

believes that graduates will be prepared for lives of servant leadership and will be able to serve the healthcare needs of this region and beyond.
